Thesis: My project is about the making a selling of the AR-15 for the military and civilians protection.

How I choose my project ?I choose my project because I think AR-15's are cool because they're so customizable. There almost like a grown ups lego kit. They can shoot a lot of rounds in short time. They come in almost all sizes of bullets and even a 410 shell. They can be used in the military and outside of your house.

How I conducted my research? I researched a lot online about the AR-15. I Read a couple books from the library about this type of gun. I watched videos on youtube and on google. I read blogs on facebook and yahoo. I asked local gun owners about the gun like dunes and bass pro shop.

I selected and constructed my Website. We choose a website because i've' never had one before.It was something new that could be neet.It aloud both of us to take it home and work on it. We didn't have to worry about us forgetting the project. I put it into short sentences because people wouldn't read it if it was long. I arrange the pictures into different sizes. I sorted in categories. We used pictures for are backgrounds.

How my project refers to the topic for this year? They had to find out why it was misfiring. They had to make it lighter and easier to carry. The had to make it more friendly to the eye. They had different countries not want making of the gun. The gun right people didn't want the gun made at all. The material to make the gun had to be special. The sold it big time to everybody. The had booming rates in the market. They are very nice gun and piece of equipment.
